Outline, sections

- outline the document HTML with high level sectioning elements like `section`, `header`, `footer`
- add titles for each section
- add classnames for special sections

Text styles

- create text style classes based on the Zeplin styleguide
- apply the text styles to your titles
- add some more text that you already have the styles for

Centered Layout

- create a `.wrap` class for centered content inside your sections

Navigation with flexbox

- create your header navigation layout using flexbox
- see this example on MDN for flexbox ideas
- apply text styles on your navigation links
- steal logo from live website

"Our Work" boxes using basic box model

- create the boxes for the "Our Work" section using basic box model
- focus on `height`, `margin`, `padding`, `background-color` and text styles
- don't worry about background images and rounded corners for now

"Meet your new team" boxes using grid

- create the boxes for the "Meet your new team" section using grid
- use pixel sizes and grid gutter
- add text styles, padding and background colors
- don't worry about the corner arrow for now

"We wrote a book" section using grid

- create the layout for the "We wrote a book" section using grid
- use pixel sizes
- add text styles, padding and background colors
- style the button
- add the image
- don't worry about rounded image corners for now
